## PROFESSIONAL SUMMARY

Passionate about **Machine Learning** (ML) and **Deep Learning** (DL), with a focus on neural-network-based sequence modeling of spatiotemporal dynamics, particularly for physical dynamical system prediction, with practical applications in fields such as weather forecasting.

My PhD has touched on many areas of ML, such as dynamic modeling, hybrid physical-ML modeling, physics-informed ML, meta-learning, multi-task learning, out-of-distribution generalization, continuous modeling, neural representations, and so on.
