PROFESSIONAL SUMMARY

Passionate about leveraging cutting-edge technologies in **Machine Learning** (ML) and **Deep Learning** (DL), my expertise lies in pioneering neural-network-based sequence modeling techniques to analyze spatiotemporal dynamics. My focus centers on predicting the behavior of complex physical dynamical systems, notably contributing to advancements in fields like weather forecasting.

Throughout my PhD journey, I've extensively explored diverse realms of ML. This includes dynamic modeling, hybridizing physical-ML approaches, physics-informed ML, meta-learning, multi-task learning, out-of-distribution generalization, continuous modeling, neural implicit representations, and so on.
